

STORYBOARDS

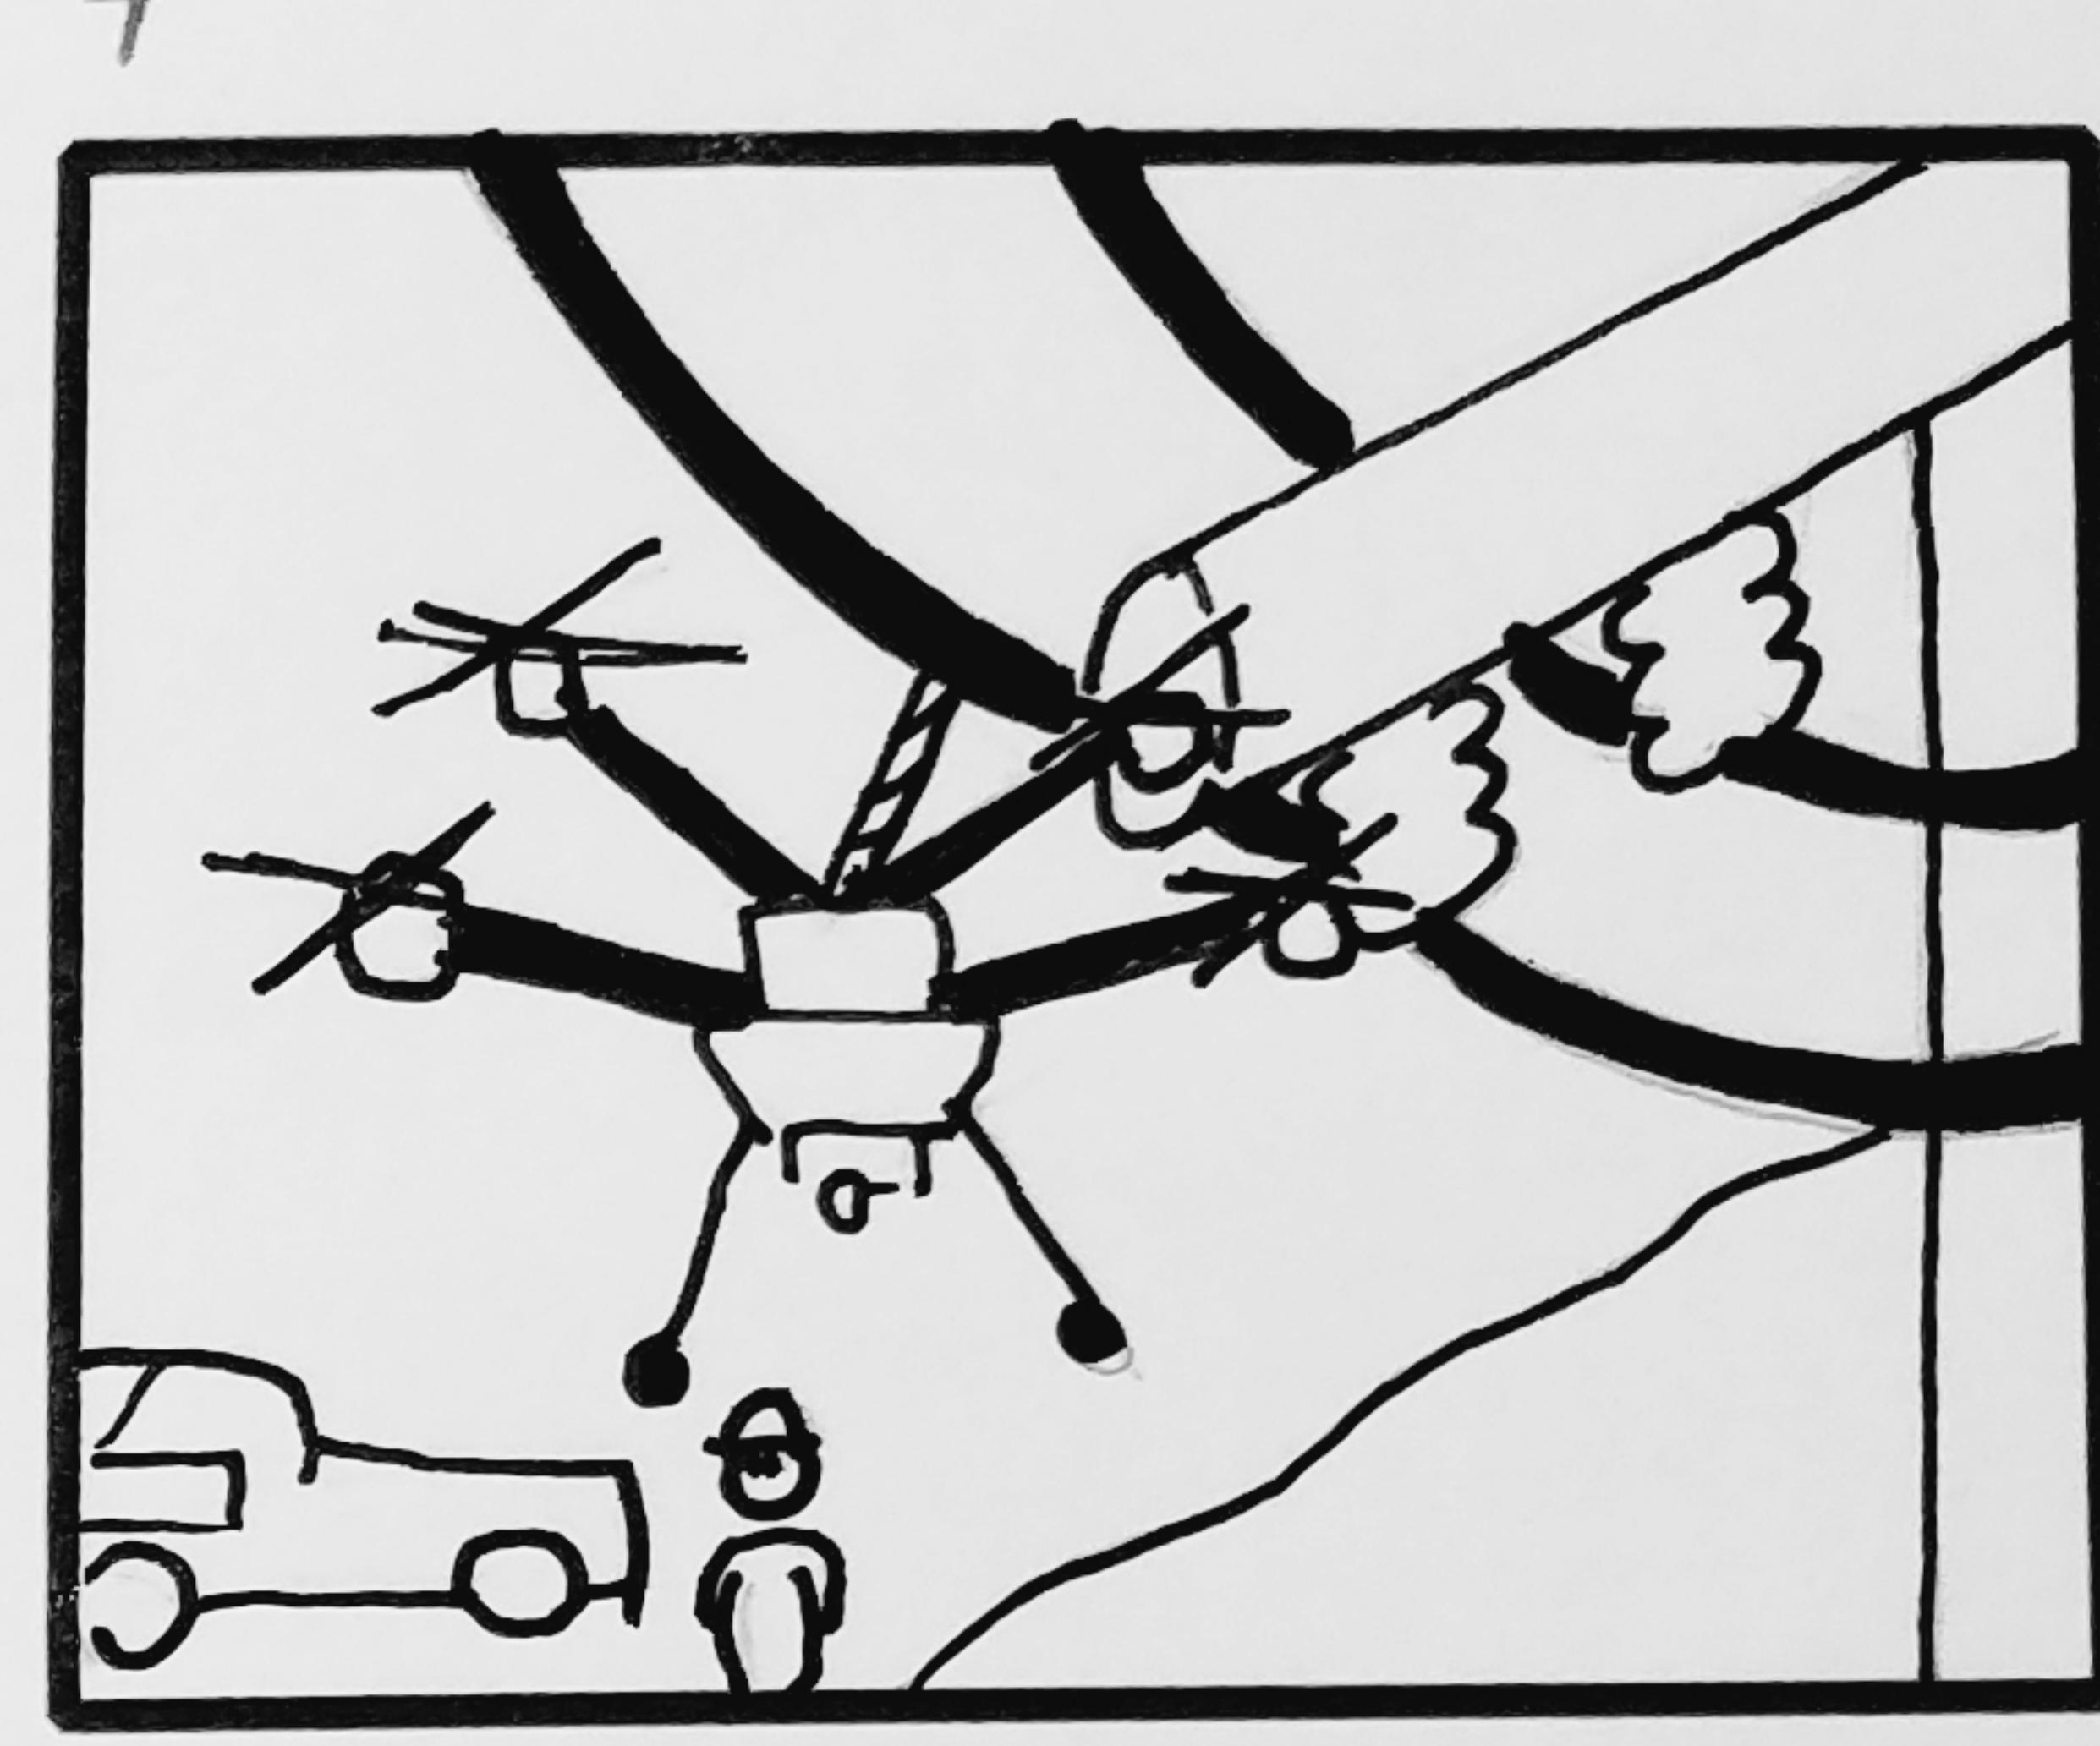

A landslide devastates a town.

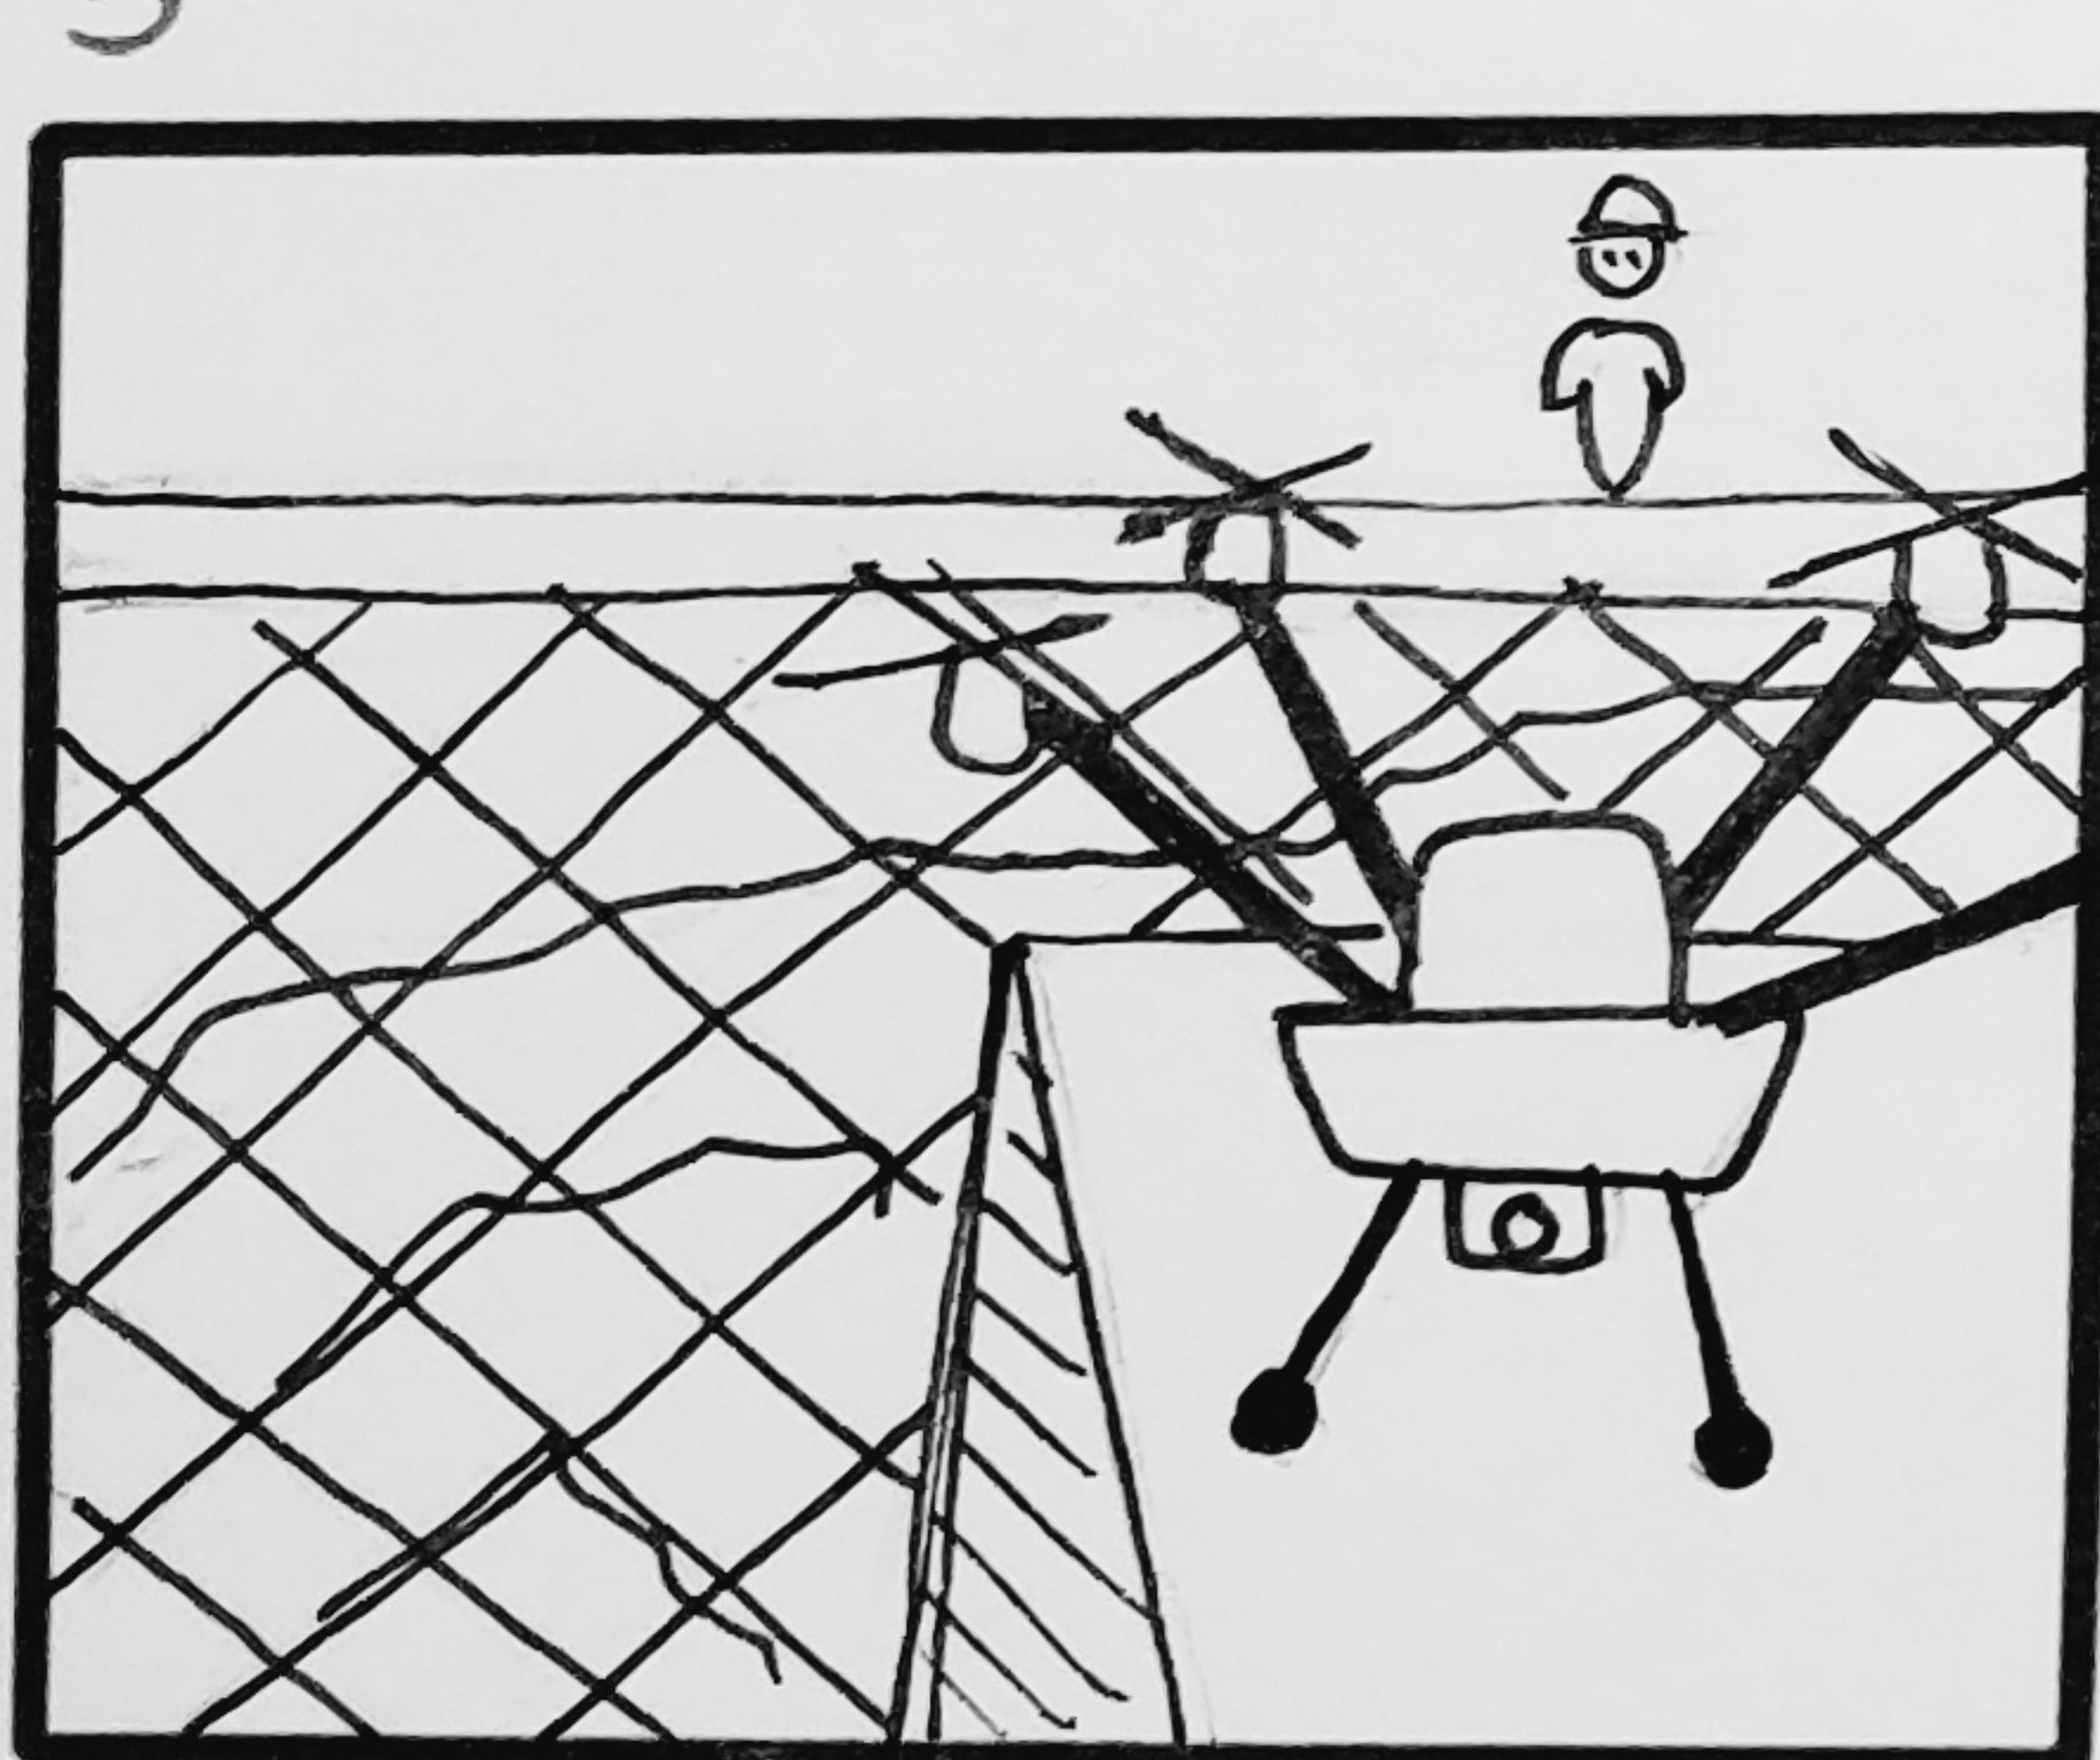

The local power company has only a vague idea of where the outages are based on calls.

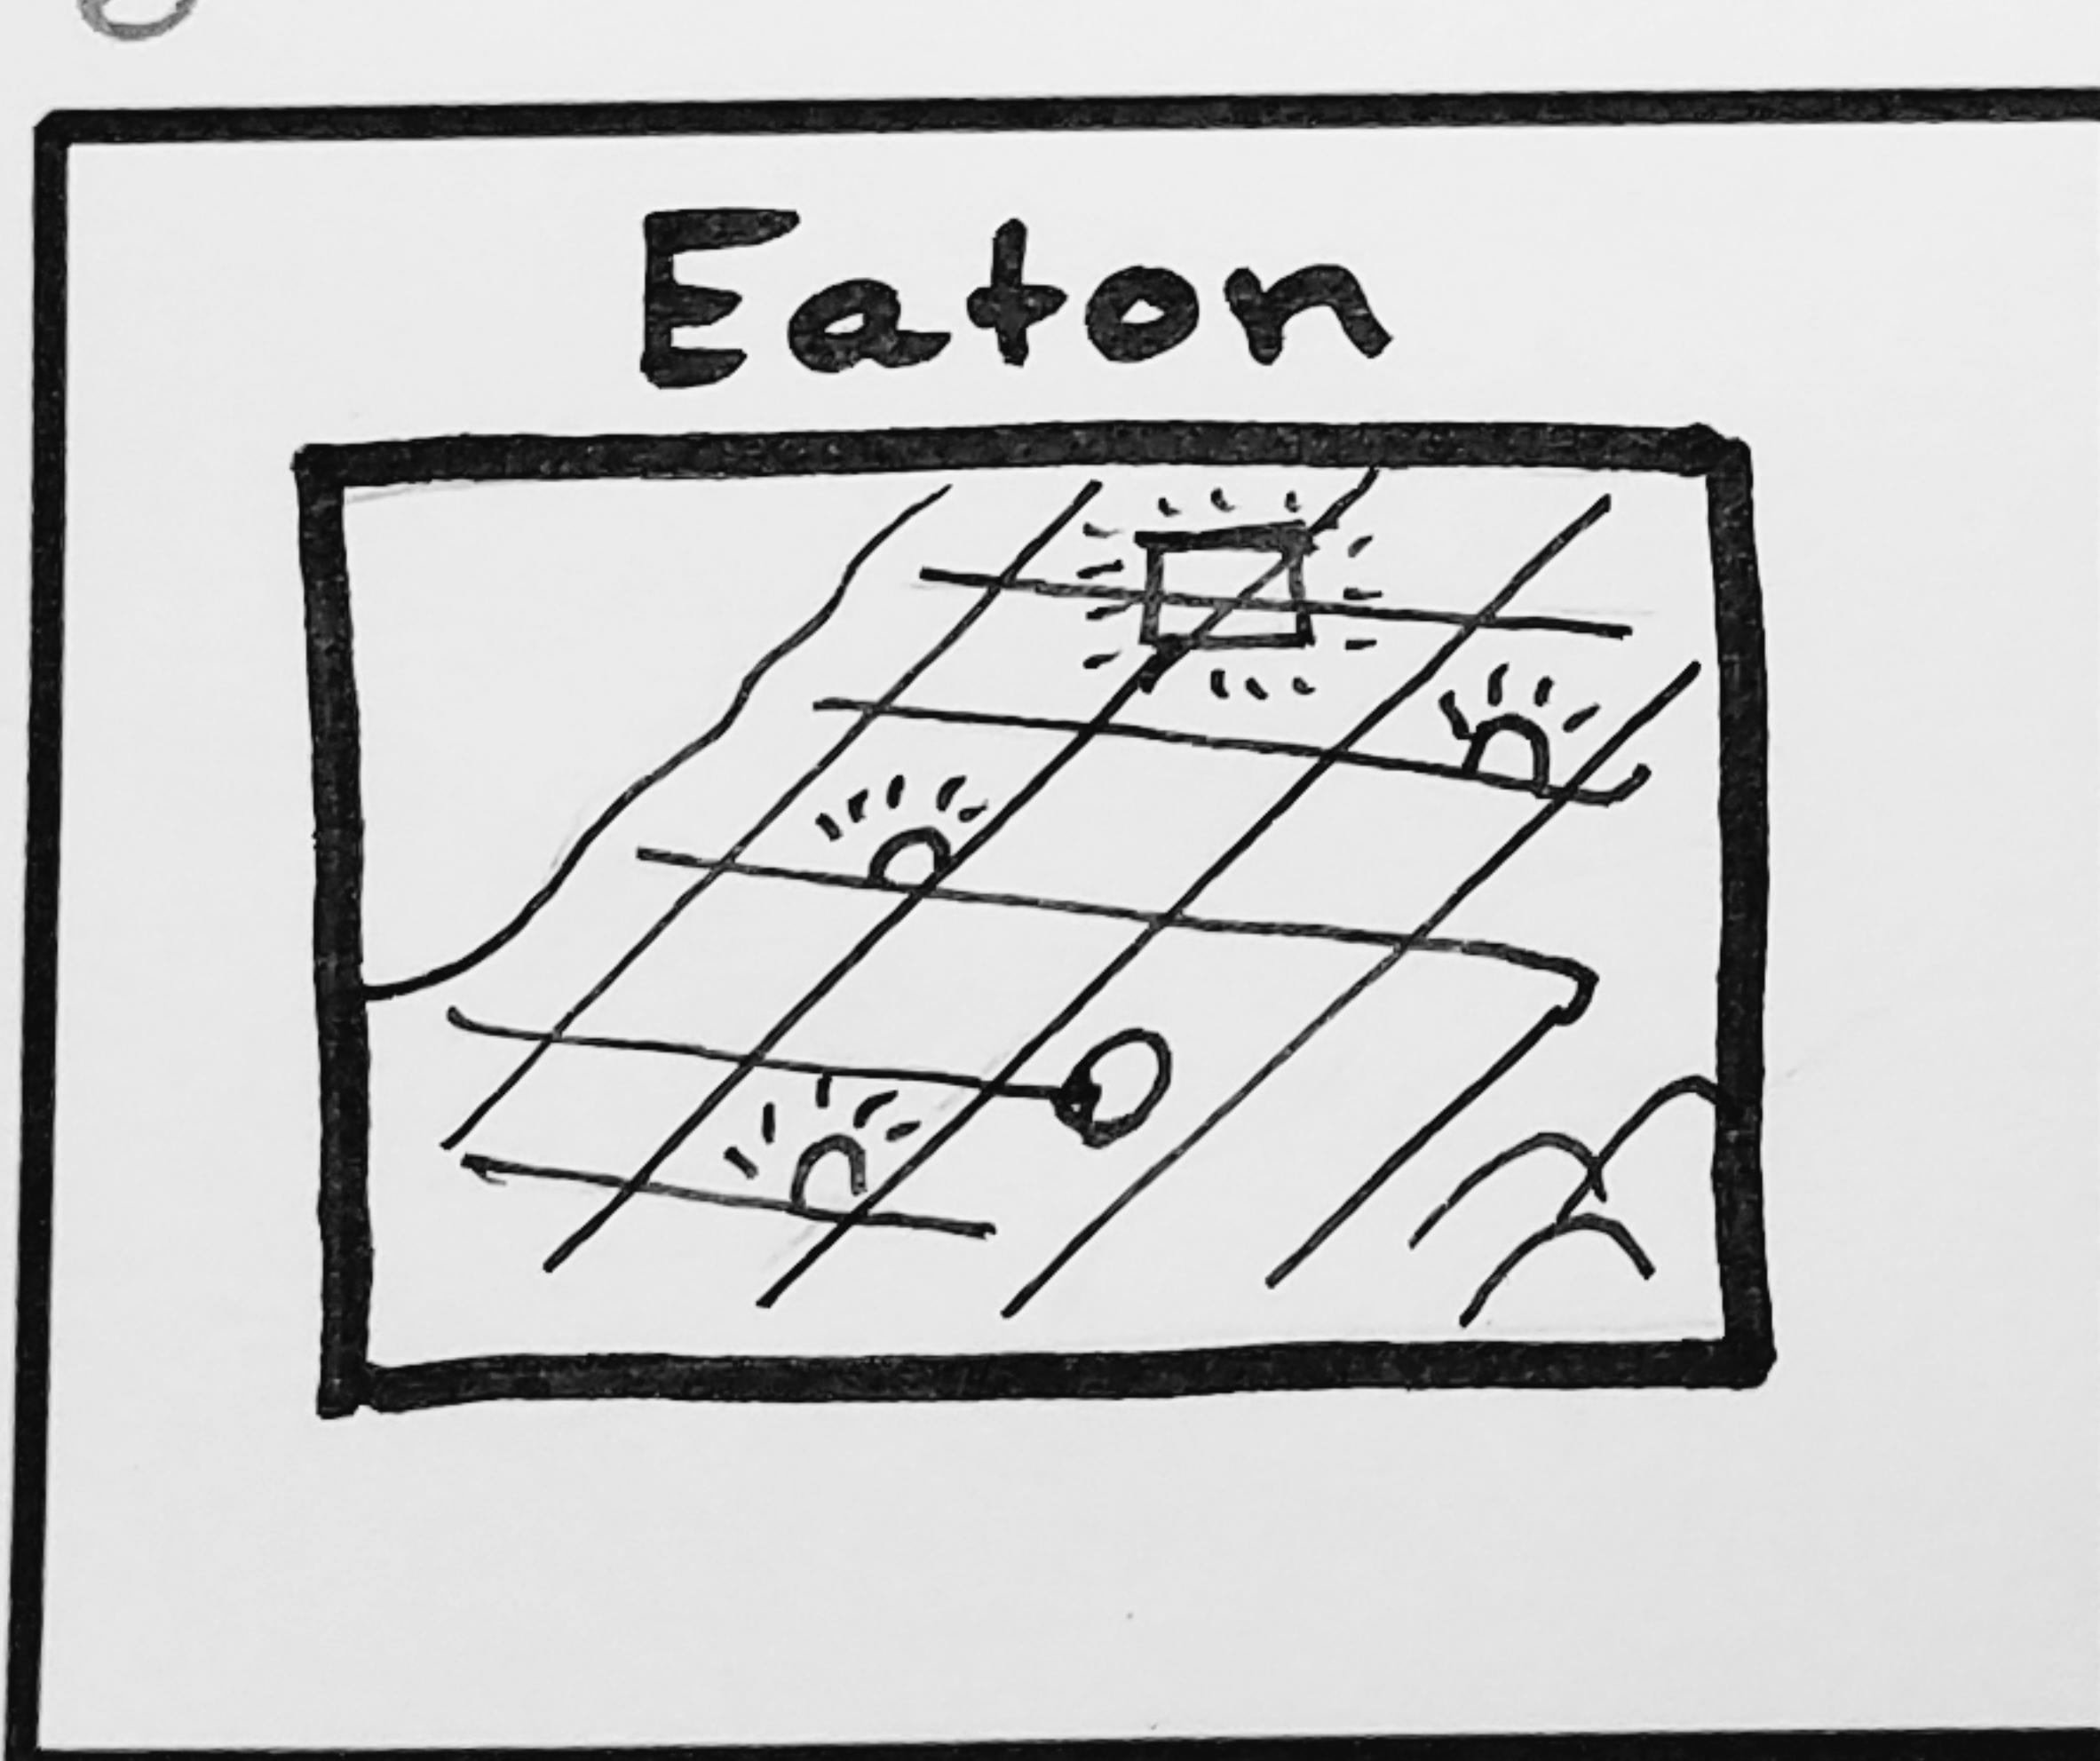

The disaster analyst decides what areas may have been damaged. The dispatcher sends out the field techs and the engineers.

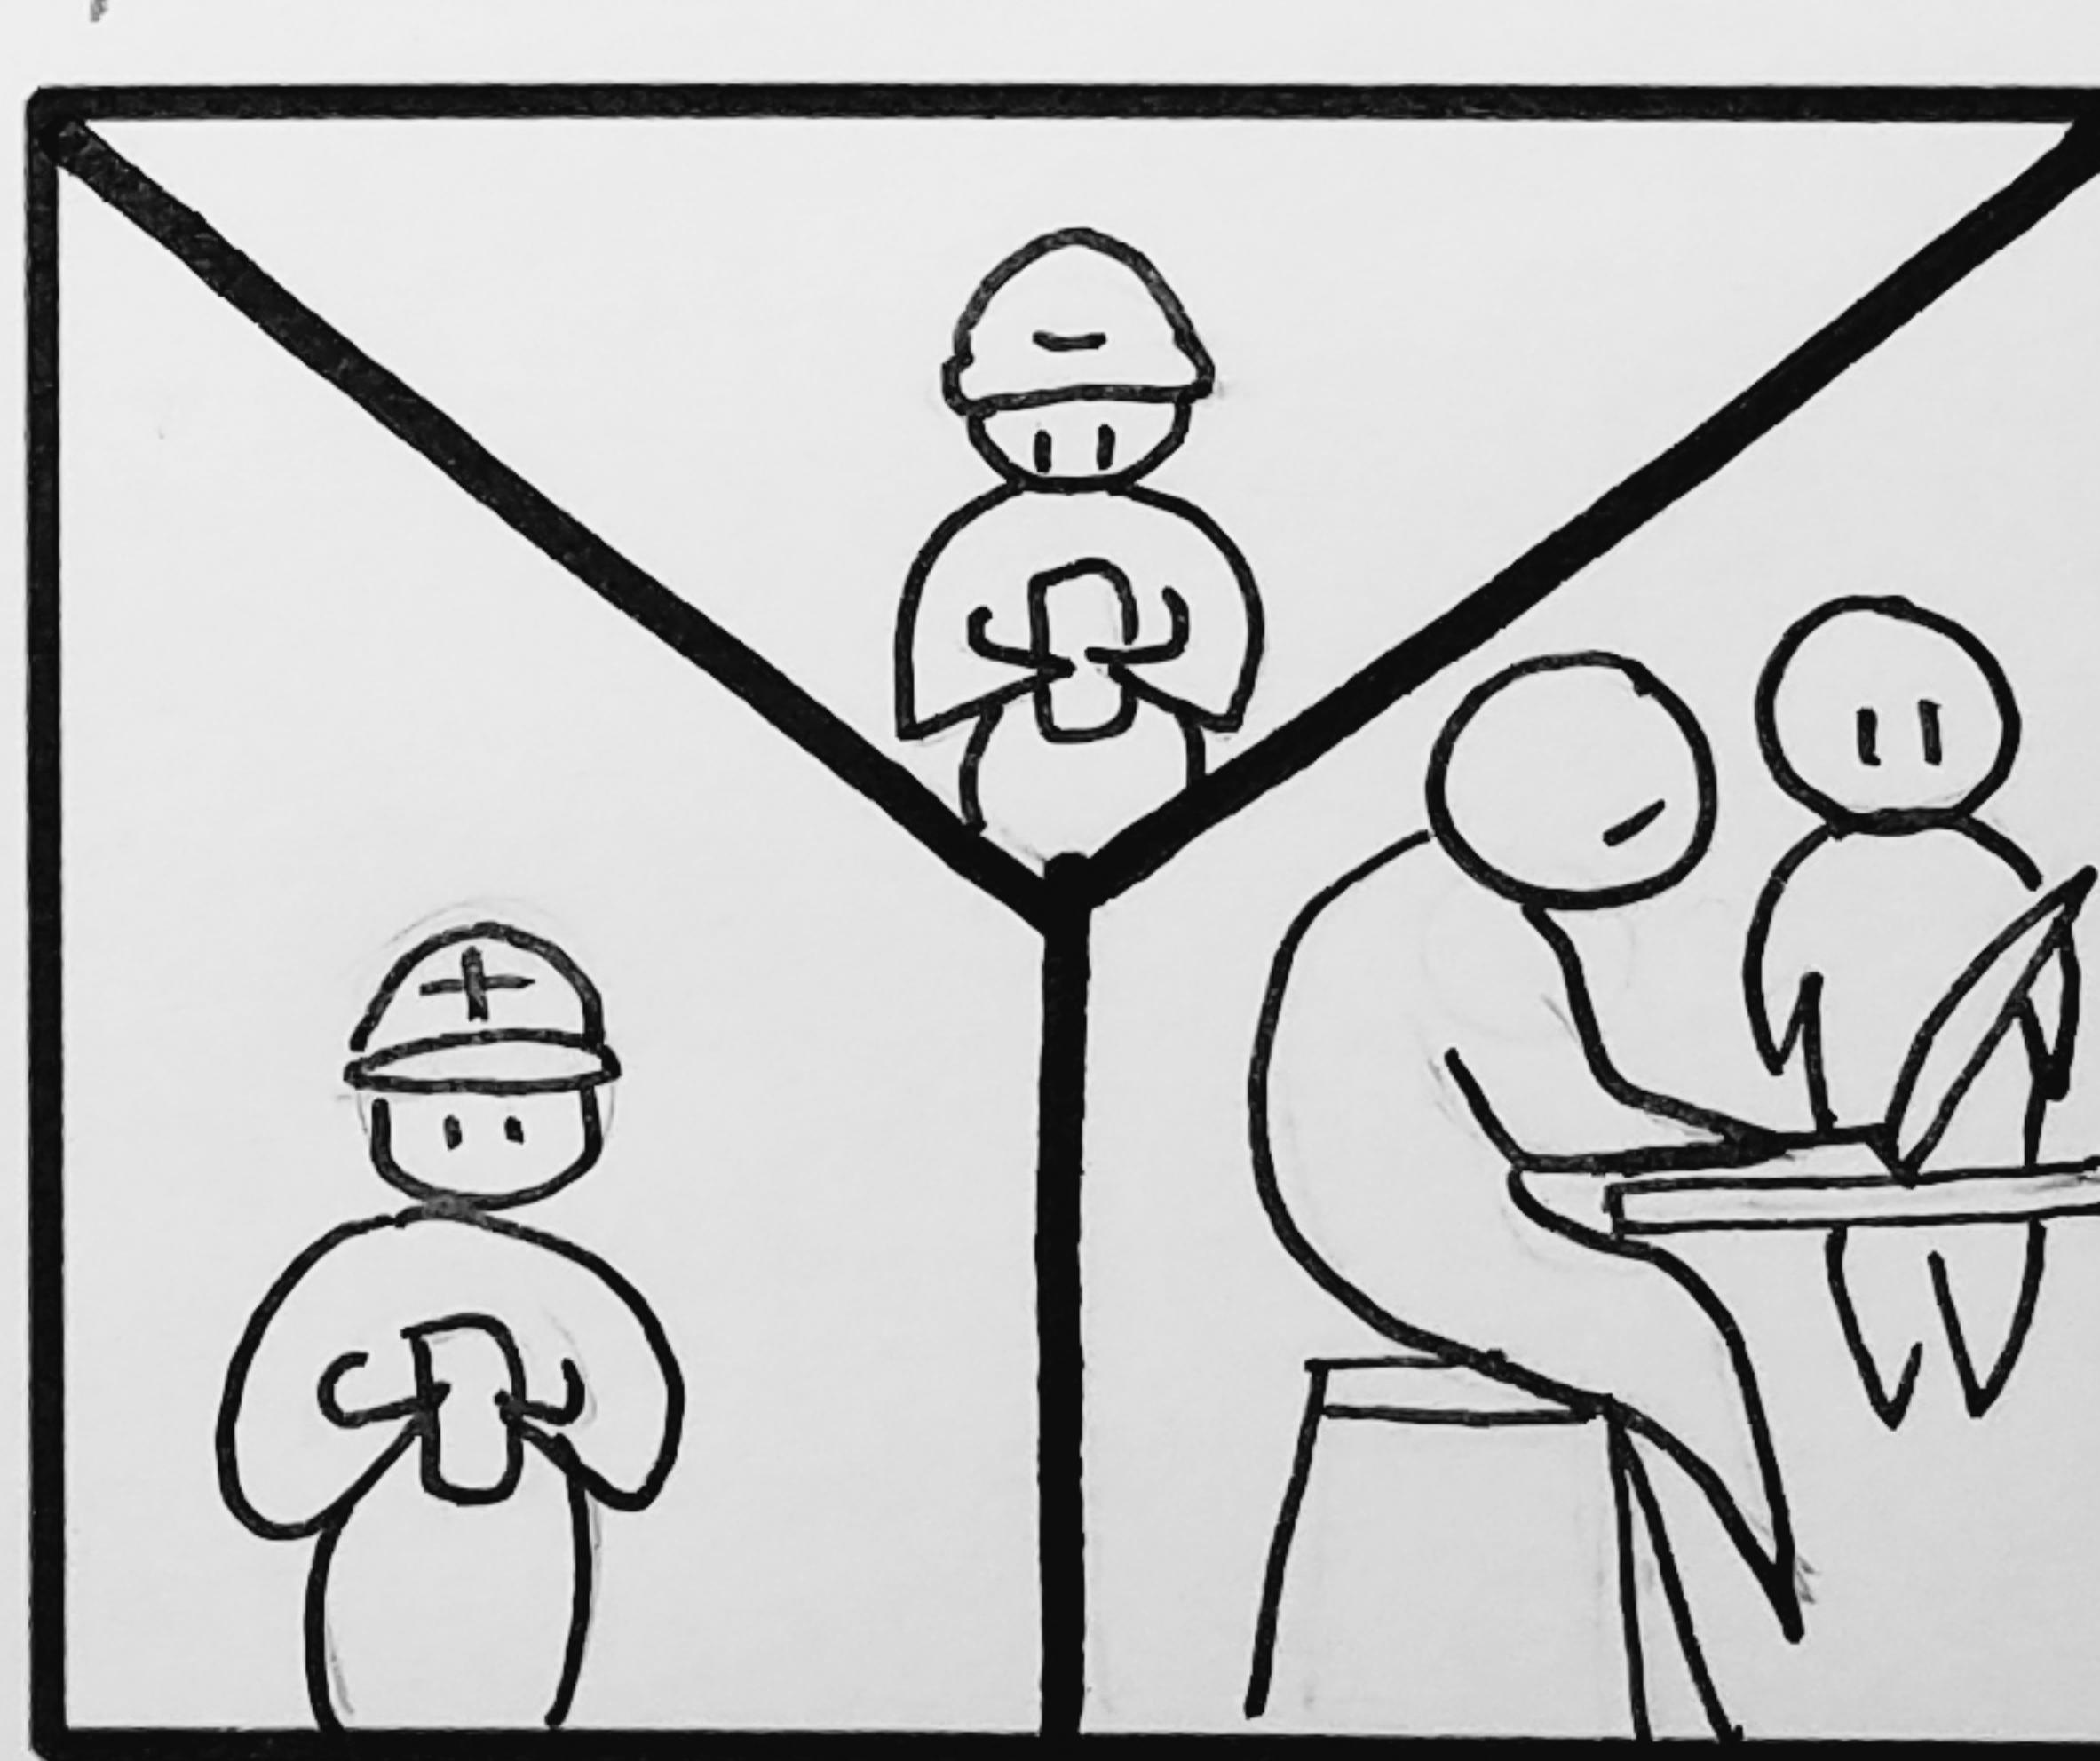

The field techs take Eaton drones with them to check power flow in lines they can't reach due to the damage.

The engineers also use Eaton drones to check inaccessible sub stations and safely de-energize the

Eaton now has specific data of all power outages in the area.

That data is sent to the power utility, aid workers, and citizens of the area.
